

ES

El panel frontal está fabricado en acero inoxidable AISI-316 y podría sustituir al de plástico. Esta es la solución perfecta para contracorrientes de plástico que a menudo se dañan durante el uso. Bombas Saci ha creado un panel frontal intercambiable de acero inoxidable pulido, que coincide con algunos tipos de contracorriente. El inserto frontal incluye: un mango semicircular, un regulador de suministro de aire para agua, interruptor piezoeléctrico o neumático y una boquilla de plástico con salida de agua ajustable.

The front panel is made of AISI-316 stainless steel and it could be a replacement for plastic one. This is the perfect solution for counter currents made of plastic that are often damaged during use. Saci Pumps has created an interchangeable front panel made of polished stainless steel, which matches some types of counter current. The front insert includes: a semi-circular handle, an air supply regulator for water, piezoelectric or pneumatic switch and a plastic nozzle with adjustable water outlet.
